

MFG.: PRICE INC.

RIDE: SIMULATOR

NOTE !! COPY 2
OPPOSITE SIDE

INTIMIDATOR SET UP

1. Park trailer and disconnect truck.
2. Put outriggers on.
3. Fire up 5000w Red generator and turn the two fuses marked "trailer" on.
4. Plug extension cord into trailer (right front corner) to power up drill.
5. Raise the outriggers - **!!!NO PRESSURE ON AXLES!!!**
6. Remove and position Black 5000w generator and small brains under front of trailer.
7. Put together and position the stage (stairs).
8. Put projector in and strap it down.
9. Fire up the other two generators.
10. Plug the pod (ride) into the black generator and turn projector on - *you will need to put it in the ride first.*
11. Plug small brains into the black generator.
12. Run the link cables up through the box to the Big brains (4 wires).
13. Turn small brains on.
 - A. Turn UPS on, wait for solid green light.
 - B. Turn computer on.
 - C. Turn Laser Disc on.
 - D. Turn monitor on.
14. Plug them in to their proper places.
LDP to LDP, RCA's to RCA's
Phone line into the TRIAD on top into slot marked SER-A
15. Turn breaker on marked "Fan".
16. Turn breaker on marked "Brains"
17. Start from the bottom of the brains and turn everything on one at a time.
18. The mini disc player will not come on yet, nor will the pump controller yet.
19. Behind the Brains is a brown power strip, turn it on - this turns on the mini disc player.
20. Turn on the white UPC next to the power strip - this will turn on the pump controller.

21. On the pump controller, turn key to "ON" then press "pump start".
22. Turn on the pump breakers ONE AT A TIME!! (In the circuit box)
23. At this point, the ride is ready to run.

THINGS TO BE AWARE OF

1. The mini disc is only 75 minutes long. You will have to start the disc over. To do this, just press the play button and it will start playing track one.
2. **FUEL - VERY IMPORTANT!** You will have to fill both gasoline generators periodically. *Keep an eye on fuel levels!* The diesel tank should be filled when you get fuel for the truck - also fill the gasoline cans.
3. **TO CHANGE SHOWS.** On the small brains, use "up" or "down" arrow keys on the key board to select the show you want, then press "Enter". The name of the show that you have selected will appear on the top of the monitor. **REMINDER:** Show #4 is on a different laser disc.

WHEN SHUTTING THE RIDE DOWN

1. Turn the key to "OFF" on the pump controller - wait about 15 seconds, then shut off the 3 pump breakers.
2. Power off the UPC in the back of the brains.
3. Power off the power strip in back of the brains.
4. Power down the rest of the brains in the front, then you may turn the breaker marked "Brains" off in the circuit box.
5. Power off the small brains.
 - A. Turn computer off
 - B. Turn LDP off
 - C. Turn monitor off
 - D. Turn UPC off
 - E. Unplug it from the generator
6. Turn projector off and remove it from the ride.
7. Unplug the extension cord from black generator that goes to the pad in the back.
8. Turn diesel generator off
9. Leave Red 5000w generator on to lower the outriggers - once that is done you can shut it off. **Make sure that all breakers are off.**
10. Pack up everything - st. outriggers, small brains, other generator etc. Strap everything down, hook up the truck and go.
